LWPCUG VOLUNTEER SPOTLIGHT

JANET RENISON, Director/Publicity LWPCUG

Janet Renison has been in LW since May of 2002. She moved here from Palos Verdes where she had resided for nearly 20 years. This Californian is a native of Orange County, born in Fullerton where she returned to post-graduate school after finishing a BA at CSULB. She has been a consultant in Human Resources for nearly 25 years working in both public and private sectors with clients like Rockwell, Boeing, County of LA and Metropolitan Water District to name a few.   She is still supporting some smaller long-time clients but is, essentially, retired.

She likes to read, do crosswords and other mind-games, work out at the Leisure World Community Center gym and visit with the host of friends she has made since coming to LW. She is involved in several of the LW organizations of interest but most closely involved with computer club activities.

She has a son, Russ. Her daughter, Michelle, has been married to her husband of 20 years, Mark, and has one son, Matt, who thinks he is pretty big stuff now that he is taller than "grandma". She also has a number of siblings, all local to Southern California, with lots of nieces, nephews and greats, all of whom enrich a very contented life.

MARTIN GOOREVITCH, Workshop Supervisor

One of the supervisors in the computer workshop is Martin Goorevitch, whose background includes B.A. and M.A. degrees in music and education and many years of experience in aerospace. His hobbies include jogging and tennis.

His computer skills were developed after joining the computer club in 1995, when he moved to Leisure World. One of the programs he learned there for the purpose of helping others is "Zoom Text". This software program, which was designed for use by the visually handicapped, was installed by the Braille Institute on some of the computers in the Workshop. It magnifies the screen according to the user's need and can be set to read the screen. Should any visually handicapped person be interested in learning how to use this program, he or she should contact the Braille Institute to set up private tutoring in the workshop. Some limited keyboard and computer facility is required.

Tonight's speaker, Mr. Steven Havert, can be reached at: Website: www.expetecsoc.com or E-mail: steven@expetecsoc.com
