

Surf 'N Stuff 'N Tips

SHARE LARGE FILES

Trying to transfer large files is a frustrating experience. Most e-mail accounts have limits on the size of attachments. However, **YouSendIt** provides a simple solution. You can upload files up to 1 gigabyte in size. Wow! Then you send a notification to the recipient. Recipients will only see the files they're invited to view. They also can download the files.

Just keep in mind that files are destroyed after one week. Further, the company says safeguards are in place to maintain the security of your files.

AN ADDICTIVE IQ PUZZLER

Do you love brain-teasing puzzle games? Judging from the response when they are mentioned, so do a lot of other people.

Well, here is a recently discovered a new IQ puzzle. Ones this good are difficult to find. So let's share it with you.

The game is deceptively simple. It's similar to checkers – you use the marbles to jump over other marbles. The goal is to end with only one marble. Sounds easy, doesn't it? Think again!

Heed this warning before you start playing this game. It is incredibly addictive, perhaps because it's so difficult. Once you start, you'll have a tough time stopping.

ARTIFICIAL INTELLIGENCE, VISUALIZED

You don't need to be a chess player to enjoy today's site. But chess enthusiasts will find it particularly enjoyable.

You start out with a chess board set to play. You'll notice the board has strange markings. They represent the influence of each chess piece.

After you make your move, something strange happens. Orange and green lines start moving across the board – hundreds of them! They reflect the software's thought process. As it considers each move, it studies the possible outcomes. Then it selects the best scenario.

It's fascinating, not to mention cool-looking. Plus it gives you insight into artificial intelligence.

Electronic Pill Boxes

Two health companies have teamed up to distribute an electronic pill box that does much more than help patients organize their medicine. The **Med-eMonitor** reminds patients when to take medicine and makes patient-specific inquiries about health measures like blood glucose levels, side effects or just general well-being. The device sends this information to a secure Web server, where practitioners monitoring a patient's care can see the information and intervene quickly if the patient stops taking medicine or reports ill-effects. The Web server also updates the device with new alerts, like upcoming doctor visits or changes in dosages.
