

**Optimizing Windows 10 During Village Restrictions, And After – Class
– 3 weeks
Mondays 10:00 to Noon from January 18th through February 1st
Instructor: Jack Schnabel**

Windows 10 continues to evolve and improve, although users can retain an earlier image of some complexity. But with the practical hands-on nature of this class, you will see it is getting both easier to use, and more adaptable to your needs and preferences.

This class will give you experience in modifying the available Windows settings to adjust for your ease of use. Your settings can be personalized, and your screen can become more comfortable to view. In addition to these settings, we will review other important settings to help you be online with up-to-date protections against malware.

I will go at a moderate pace, and always have time for questions. There will be two class meetings for instruction, and a third meeting that will be open to address any questions you have about your individual Windows 10 computer set up.
